/*tag= a /note= "PCR amplified fragment" Peanut allergen Ara hl P41B cDNA. AAF90339 standard; cDNA; 2032 BP. (revised)
(first entry) Arachis hypogaea. Key misc_feature 11-SEP-2003 23-JUL-2001 AAF90339; RESULT 1 AAF90339

20-NOV-2000; 2000WO-US031657 99US-0167255P (UYAL-) UNIV ALABAMA A & M. WO200136621-A2 19-NOV-1999; 25-MAY-2001

Producing transgenic peanut plants that produce allergen-free seeds, useful in non-allergenic foods, by antisense or sense co-suppression of Viquez OM; Konan KN, allergen-encoding genes. Dodo HW, Arntzen CJ, WPI; 2001-355630/37.

Claim 20; Fig 5; 72pp; English.

The present sequence is that of peanut allergen Ara hl P41B cDNA. A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              780
portion of this gene is homologous to the corresponding region of the peanut allergen Ara hl P17 gene. This region has been PCR amplified, cloned in transformation vectors (pUC18 and pB14434) in sense and antisense orientations and used to down-regulate Ara hl P41B and Ara hl P17 allergens in peanut. This is an example of the method of the invention, which relates to the production of a peanut plant having reduced, or undetectable, allergenic protein (AP) content in its seed. A peanut plant cell is transformed with a DNA construct containing an antisense AP gene and/or sense AP gene, or their fragments, regenerated to plants, and fertile transgenic plants that produce seeds with reduced AP content are identified. The seeds are useful for preparation of allergen-free foods. (Updated on 11-SEP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modification may also comprise mutation of the IgE binding sites to reduce allergenicity. Also included are: (1) a method of making a modified anaphylactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (2) a transgenic plant or animal expressing the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen is useful for preventing or treating allergen; anaphylactic food allergen is useful for preventing or treating allergic reactions associated with any natural allergen such as food, insect,

The invention relates to a modified anaphylactic food allergen whose amino acid sequence is substantially identical to that of a natural anaphylactic food allergen. The natural anaphylactic food allergen includes at least one cysteine residue that participates in a disulphide bond when the natural anaphylactic food allergen is in its native conformation, except that the cysteine residue has been modified so that it cannot participate in the disulphide bond. Also included are a method of making a modified anaphylactic food allergen, a nucleotide molecule encoding a modified anaphylactic food allergen, a nucleotide molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cockrell G;

cuccleotide molecule for causing a site specific mutation in a gene encoding a natural anaphylactic food allergen, a transgenic plant or animal expressing a modified anaphylactic food allergen defined above, a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen and an isolated fragment of peanut allergen and an isolated fragment of peanut allergen and an isolated fragment of peanut allergen and Ara h 1, comprising at least 10 consecutive amino acids of ADG27464 or ADG27465. About 10-17% of the amino acids have been modified in at least one IGE epitope or all the IGE epitopes recognised when the natural anaphylactic food allergen is contacted with serum 19E from individual (s) allergic to the natural anaphylactic food allergen. The invention discloses Peanut allergens Ara h1, Ara h2, Ara h3 (and their encoding cDNAs), Soybean Glycinin A2B1a and IGE-binding epitopes of the English cannut allergen Jug n1. The modified anaphylactic food allergen can be used for treating allergic reactions or wounds. The present sequence encodes a Peanut allergen of the invention. 120 180 TGCCAAGTCATCACCTTACCAGAAGAAAACAGAGAACCCCTGCGCCCCAGAGGTGCCTCCA 180 240 240 360 420 480 480 540 540 900 99 780 420 600 9 AATAATCATATATATTCATCAATCATCAATAAGTAGTAGCAGGAGCAATGAGGAGGAGGAG TGCCAAGTCATCACCTTACCAGAAGAAAACAGAGAACCCCTGCGCCCCAGAGGTGCCTCCA GAGTIGICAACAGGAACCGGAIGACTIGAAGCAAAAGGCAIGCGAGTCCGCIGCACCAA GCTCGAGTATGATCCTCGTTGTGTCTATGATCCTCGAGGACACACTGGCACCACCACCACCA ACGTTCCCCTCCAGGGGAGCGGACACGTGGCCGCAACCCGGAGACTACGATGATGACCG ACGTTCCCCTCCAGGGGGAGCGGACACGTGGCCCCCAACCCGGAGACTACGATGATGACCG ACGGAAAATAAGGCCCCGAAGGAAGAGAAGGAGAACAAGAGTGGGGAACACCCAGGTAGCCA CCGCTACGGGAACCAAAACGGTAGGATCCGGGTCCTGCAGAGGTTTGACCAAAGGTCAAG GCAGTTTCAGAATCTCCAGAATCACCGTATTGTGCAGATCGAGGCCAAACCTAACACTT AATAATCATATATATTCATCATCATCTATATAAGTAGTAGCAGGAGCAATGAGAGGGAG GGTTTCTCCACTGATGCTGTTGCTAGGGATCCTTGTCCTGGCTTCAGTTTCTGCAACGCA GAGTTGTCAACAGGAACCGGATGACTTGAAGCAAAAGGCATGCGAGTCTCGCTGCACCAA CCGTCAACCCCGAAGAGGAGGCCCGATGGGGACCAGCTGGACCGAGGGAGCGTGA CCGCTACGGGAACCAAAACGGTAGGATCCGGGTCCTGCAGAGGTTTGACCAAAGGTCAAG TGTTCTTCCCAAGCACGCTGATGCTGATAACATCCTTGTTATCCAGCAAGGCAAGCCAC AAGAGAAGAAGACTGGAGACAACCAAGAGAATTGGAGGCGACCAAGTCATCAGCAGCC **ACGGAAAATAAGGCCCGAAGGAAGAGAAGGAGAGACAAGAGTGGGGAACACCAGGTAGCCA** TGTGAGGGAAGAACATCTCGGAACAACCTTTCTACTTCCCGTCAAGGCGGTTTAGCAC GCAGTITCAGAATCTCCAGAATCACCGTATTGTGCAGATCGAGGCCAAACCTAACACTCT Gaps Length 2032; ö Sequence 2032 BP; 628 A; 473 C; 530 G; 401 T; 0 U; 0 Other; 0; Indels DB 10; 100.0%; Score 2032; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a novel isolated nucleic acid molecule encoding the peanut allergen Ara h I that has been identified in patients with a tapping dermatritis. Specifically, it refers to a monoclonal antibody enzyme-linked immunosorbant assay (ELISA) used to detect and quantify the peanut allergens, where the monoclonal antibodies have specificity for a selected peanut allergen antigen. The present invention also describes hybridomas that produce two-site monoclonal antibodies specific for a peanut allergen that can be used in an ELISA to detect and determine the concentration of a specific peanut allergen in a food product or in food protuct acid or its fraction can include a diagnostic label. Accordingly, these nucleic acids are useful for obtaining diagnostics with optimal concentrations of each allergen or for developing panels of mixtures of large numbers of recombinant allergens such that it can be used in immunotherapy for the treatment of food hypersensitivity reactions. This polynucleotide sequence is the peanut Ara h I allergen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid encoding peanut allergen Ara h 1, useful for obtaining diagnostics with optimal concentrations of each allergen, for developing panels of mixtures of recombinant allergens, and in immunotherapy.
                                                                                                                                                                                                                                                                                                                                  allergen; atopic dermatitis; diagnostic; immunotherapy; immediate type hypersensitivity; Ara h I; dermatological; antiallergic; immunosuppressive; antibody engineering; ss.

This invention relates to a novel isolated nucleic acid molecule encoding the peanut allergen Ara h I that has been identified in patients with a tropic dermatitis. Specifically, it refers to a monoclonal antibody carpy enzyme-linked immunosorbant assay (ELISA) used to detect and quantify the peanut allergens, where the monoclonal antibodies have specificity for a selected peanut allergen antigen. The present invention also describes to hybridomas that produce two-site monoclonal antibodies specific for a peanut allergen that can be used in an ELISA to detect and determine the concentration of a specific peanut allergen in a food product or in food processing. Furthermore, it provides an expression vector and the isolated nucleic acid or its fraction can include a diagnostic label. Accordingly, these nucleic acids are useful for obtaining diagnostics with optimal concentrations of each allergen or for developing panels of mixtures of large numbers of recombinant allergens such that it can be used in immunotherapy for the treatment of food hypersensitivity candid survention.

Chord (PI) clone) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 GGTTTCTCCACTGATGCTGTTGCTAGGGATCCTTGTCTGGCTTCAGTTTCTGCAACGCA 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence represents the coding sequence of anaphylactic antigen Ara h 1 is an anaphylactic antigen (A), which was used to design antigenic peptides having a reduced ability to bind immunoglobulin E (195) as compared with the intact (A), or having a sequence substantially identical to a portion of sequence of an antigen that includes at least one IgE binding site of the peptide is altered. The antigenic peptides are used in a composition which is useful for reducing risk or severity of allergic reaction to an antigen. This is done by identifying an individual at risk of allergic reaction to an antigen. Or an antigen, or a familial relationship with an individual who exposed to the antigen. Pervioually displayed allergic symptoms when exposed to the antigen. Collowing this an antigen-specific IgE present on one or more mast cells or basophils in the individual's serum is identified. The individual is which is selected with a peptide corresponding to a portion of the antigen, which is selected, formulated, and delivered so that binding of the peptide to antigen. Pervious is also useful for treating and manapose the converse of interact antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

This cDNA clone, designated P41b, codes for the major peanut allergen Ara hI (AAW22150), which has multiple IgE binding epitopes (see AAW24165-87). It was amplified from peanut seed cDNA using a primer (see AAT6616) based on an isolated Ara hI peptide (see AAW24206). The sequence shows significant homology with the vicilin family of seed storage proteins of other legumes. The gene is capable of producing a protein product in prokaryotic cells that is recognised by serum IgE from a large proportion of individuals with peanut hypersensitivity. Ara hI and Ara hII (see AAW24164) can be used to raise monoclonal antibodies which are used in a specific two-site MAD ELISA for the detection of Ara hI or Ara hII (Claimed). IgE-binding Ara antigen epitopes may be used in vaccines to protect against allergic reactions to peanut allergens, e.g. anaphylactic shock. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAGAGAAGAAGACTGGAGACAACCAAGAGATTGGAGGGGACCAAGTCATCAGCAGCC 480

                                                                                                                 This is the nucleotide sequence of the Ara h 1 protein from Arachis hypogea. The Ara h 1 protein has 23 IgE (Immunoglobulin E) binding epitoges, four of which are immunodominant (AAVI5247, AAVI5249, AAVI5250 and AAVI5263). By modifying the IgE binding sites the ability of the allergen to provoke an immune response is downregulated. The epitopes of the IgE binding sites can therefore be modified in genetically engineered plants and animals to elicit less of an allergic response. (Updated on 17-0CT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               540

It was amplified from peanut seed cDNA using a primer (see AAT76616) based on an isolated Ara hI peptide (see AAW24206). The sequence shows significant homology with the vicilin family of seed storage proteins of other legumes. The gene is capable of producing a protein product in prokaryotic cells that is recognised by serum IgE from a large proportion of individuals with peanut hypersensitivity. Ara hI and Ara hII (see AAW24164) can be used to raise monoclonal antibodies which are used in a specific two-site MAD BLISA for the detection of Ara hI or Ara hII (claimed). IgE-binding Ara antigen epitopes may be used in vaccines to protect against allergic reactions to peanut allergens, e.g. anaphylactic shock. (Updated on 17-OCT-2003 to standardise OS field)

The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural canaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modification may also comprise mutation of the IgE binding sites to comprise mutation of the IgE binding sites to complicate allergenicity. Also included are: (1) a method of making a complyactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; (5) and an isolated fragment of peanut allergen such as 1 from allergen; con an anaphylactic food allergen is useful for preventing or treating allergic reactions associated with any natural allergens uch as food, insect, cubber or preferably anaphylactic allergens. It is also useful for treating wounds in mammals such as bovine, canine, feline, captine, covine, mutine or equine species. The present sequence is a cDNA concluding a peanut allergen (e.g. Ara hl, h2 or h3)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

```

This invention relates to a novel isolated nucleic acid molecule encoding the peanut allergen Ara h I that has been identified in patients with a topic dermatitis. Specifically, it refers to a monoclonal antibody enzyme-linked immunosorbant assay (ELISA) used to detect and quantify the nary manual allergens, where the monoclonal antibodies have specificity for a selected peanut allergen antigen. The present invention also describes hybridomas that produce two-site monoclonal antibodies specific for a peanut allergen that can be used in an ELISA to detect and determine the concentration of a specific peanut allergen in a food product or in food processing. Furthermore, it provides an expression vector and the secondary processing. Furthermore, its fraction can include a diagnostic label. Accordingly, these nucleic acids are useful for obtaining diagnostics with optimal concentrations of each allergen or for developing panels of mixtures of large numbers of recombinant allergens such that it can be used in immunocherapy for the treatment of food hypersensitivity reactions. This polynuclecide sequence is the peanut Ara h I allergen con the invention.

The invention relates to a modified anaphylactic food allergen whose amino acid sequence is substantially identical to that of a natural camphylactic food allergen. The natural anaphylactic food allergen is in a disulphide includes at least one cysteine residue that participates in a disulphide bond when the natural anaphylactic food allergen is in its native conformation, except that the cysteine residue has been modified anaphylactic food allergen, a nucleotide molecule of making a modified anaphylactic food allergen, a nucleotide molecule conformation a modified anaphylactic food allergen, a transgenic plant or nucleotide molecule for causing a site specific mutation in a gene conformation and modified anaphylactic food allergen defined above, a manimal expressing a modified anaphylactic food allergen defined above, a companylactic food allergen by administering a modified anaphylactic food allergen defined above, a natural anaphylactic food allergen by administering a modified or anaphylactic food allergen by administering a modified in at least or anaphylactic food allergen and is contacted with serum IgE from individual (s) allergen by an anaphylactic food allergen anaphylactic food allergen by adminimation and an isolated fragence or all the matural anaphylactic food allergen and IgE-binding epitopes of the English walnut allergen by an in Ara Distant and IgE-binding epitopes of the English and IgE-binding epitopes of the Engli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            48 CAATGAGAGGGATTTCTCCCACTGATGCTGTTGCTAGGGATCCTTGTCCTGGCTTCAG 107
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New modified anaphylactic food allergen comprising a cysteine residue which has been modified so that it cannot participate in the disulfide bond, useful for treating allergic reactions or wounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 CAATGAGAGGGAGGTTTCTCCACTGATGCTTGTTGCTTGGGATCCTTGTCCTGGCTTCAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence represents anaphylactic antigen Ara h 1, cDNA clone P17. Ara h 1 is an anaphylactic antigen (A), which was used to design antigenic peptides having a reduced ability to bind immunoglobulin E (IEE) as compared with the inteact (A), or having a sequence substantially compared with the inteact (A), or having a sequence substantially compared by a portion of sequence of an antigen that includes at least one IEE binding site of the peptide is altered. The antigenic peptides are used in a composition which is useful for reducing risk or severity of allergic reaction to an antigen. This is done by identifying prior display of allergic symptoms when exposed to the antigen, or a familial relationship with an individual who compared with an antigen-specific IGE present on one or more mast cells or basophis in the individual's serum is identified. The individual is contacted with a peptide corresponding to a portion of the antigen, which is selected, formulated, and delivered as compared with IGE binding to entire and contact antigen. The composition is also useful for treating and

This invention relates to a novel isolated nucleic acid molecule encoding the peanut allergen Ara h I that has been identified in patients with a topic dermatritis. Specifically, it refers to a monoclonal antibody catopic dermatritis. Specifically, it refers to a monoclonal antibody catopic dermatritis. Specifically, it refers to a monoclonal antibody catopic and guantify the peanut allergens, where the monoclonal antibodies have specificity for a selected peanut allergen antigen. The present invention also describes by hybridomas that produce two-site monoclonal antibodies specific for a peanut allergen that can be used in an ELISA to detect and determine the concentration of a specific peanut allergen in a food product or in food produce or in food concentration of a specific peanut allergen or expression vector and the isolated nucleic acid or its fraction can include a diagnostic label. Accordingly, these nucleic acids are useful for obtaining diagnostics with optimal concentrations of each allergen or for developing panels of mixtures of large numbers of recombinant allergens such that it can be used in immunotherapy for the treatment of food hypersensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TGCAGGGCTTCAGCAGGAATACGTTGGAGGCCGCCTTCAATGCGGAATTCAATGAGATAC 1046
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             reactions. This polynucleotide sequence is the peanut Ara h I allergen CDNA (clone 5 Ala) of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a new Glycinin characterised by the atomic coordinate data fully defined in the specification. The structure can be used for improving processability of soya protein. The present nucleic acid sequence encodes the Glycine max (Soybean) var. Wasesuzunari

November 2005

Published_Applications Nucleic Acid and Published_Applications Amino Acid database searches now generate two sets of results each. The Published_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published_Applications_New databases; older published applications make up the Published_Applications_Main databases.

Searches run against Nucleic Acid Published_Applications produce two sets of results, with the extensions .rnpbm (Published_Applications_NA_New).

Searches run against Amino Acid Published_Applications produce two sets of results, with the extensions .rapbm (Published_Applications_AA_New).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in 800c freezer. Total RNA was isolated with TRIZOL-Reagent total RNA (Promega). CDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECORI sites adapters. The lamda library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluescript phagemids from the Uni-ZAP XR vector. and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1290
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1410
